AIM Robotics Monthly Newsletter

October 2023

Some photos from our meetings so far!

Start of the Season and Design Process

AIM Robotics has had an amazing start to the season! We kicked things off in September by hosting an **engineering portfolio workshop at NYC FTC kickoff** for all interested teams. Over the past few weeks, we've been **actively testing multiple mechanisms simultaneously** to determine which ones work best for our robot in this year's competition. For instance, we've been comparing a viper slide with a regular lift for our robot's arm. In the days ahead, we'll be narrowing down our choices as we gear up for our **first qualifier on November 18.** This season, our primary focus has been on **improving our programming** alongside the robot's construction to ensure a more efficient design process.

Monthly Spotlight - Sophia

Our first *Monthly Spotlight* this year features **Sophia**. She joined AIM Robotics this year as a tenth grader and is part of the mechanics team. She also helped start our FLL program, called FLL Fest, which supports FLL teams in creating their innovation projects. Sophia has already done a lot for our team, and we're excited to see what she'll accomplish this season and in the future.
